

FDEM AUXCOMM HF MONITORING SCRIPT

This script is to be used on the assigned day or night frequency for non-restricted net operations. This is what we will generally use following a hurricane/incident that hasn't severely impacted communications (to our knowledge.) Should we discover that a county is relying on HF for communications, the restricted net script should be utilized, and the frequency should be restricted to emergency traffic only.

***If the impacted county(ies) have SHARES licenses,** SHARES frequencies can and should be used to avoid interference from rogue amateur stations. FDEM SHARES callsign is WGY974.*

“WGY974 monitoring for SHARES stations in impacted areas” _____ **(UNKEY)**

Start of net operations & every 30 minutes

This is KA4EOC, at the State of Florida Emergency Operations Center. We are monitoring this frequency for any emergency traffic from Florida County EOC's as well as state and federal partners. We are not in a restricted net at this time but we are monitoring this frequency for any emergency or priority traffic. This is KA4EOC, State of Florida Emergency Operations Center. Operator _____ **(UNKEY)**

Net Closure

This is KA4EOC, at the State of Florida Emergency Operations Center. At this time, we will return to monitoring the statewide repeater network, SARNET, only. Thank you for your patience and cooperation during this incident. This is KA4EOC Operator _____ **(UNKEY)**
